DETAILED ACTION

1. Applicant's arguments filed May 6, 2003 have been fully considered but they are not persuasive.

Examiner acknowledges that claims 4-11 remain in the application. Claims 4-11 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 6.

In response to applicant's argument that equipotential surface is formed by the field applier in the electric field, figure 1 showing equipotential surface of equipotential surface group (51), it appears that equipotential surface group 51 is an electric field. It appears that the claim limitation "equipotential surface" is indefinite since one of ordinary skill in the art cannot definitively determine the "surface" of an electric field. A search in the art suggest that an "electric field" is usually described in relation to or developed by a surface. If applicant is claiming a "surface" of an "electric field," it appears that applicant does not provide a teaching to determine such.

In response to applicant's argument that Hochberg does not disclose a field applier forming an equipotential surface convexed with respect to the liquid surface, the claim recites "a field applier forming an equipotential surface." The recitation does not appear to limit the "equipotential surface" to an electric field surface. Rather, the plain meaning of the recitation indicates that the equipotential surface is a surface of the field applier.
